## Compress Expand

Exclusive line of sports nutrition products intended for the most demanding clients. Each product from this line has unique ingredients and contains substances that any other firm and product cannot offer.

Characteristic feature of this new line is usage of top quality brand-name ingredients with transparent origin. Moreover all used items are in the highest efficient and legally allowed dosages to be approved for sale in EU. The goal of these “tou-

gh and special supplements” is the one and only – maximum possible effect and maximum consumers satisfaction.

This is COMPRESS EXPAND – brand developed in modern laboratories and with support of the best Czech and Slovak bodybuilders.

Brand intended for everybody who wants the best to be the best!

# COMPRESS COLOSTRUM

vanilla

Intended for special nutrition

## COMPRESS COLOSTRUM

90 % protein supplement with minimum fat (0,3g) and carbohydrates (0,6 g) content ideal for hard shaping and fat losing trainings.

This unique protein supplement is enriched with bioactive colostrum containing growth factors. These factors (polypeptide hormones) have similar strong effects as insulin - they function in cells splitting and favourably influence metabolic processes of muscle tissue. Colostrum moreover increases amino acids and carbohydrates effect.

If you use **COMPRESS COLOSTRUM** (together with glucose) post your training, you will get the best and in the same time the fastest absorbable blend which guarantees fast start of recovery processes and immediate change of organism into anabolic (muscle building) phase.

**COMPRESS COLOSTRUM** is suitable for all sportsmen who want to have lean muscle mass with no redundant fat and for all sportsmen in reduction diets.

Top protein product contains 100 % whey isolate (WPI) and addition of bioactive colostrum.

**Excellent bioactive colostrum** is the most valuable mother's milk of mammals which is created only few hours after giving birth. It contains growth factors which stimulates anabolic processes in muscle tissue.

Very interesting characteristics of colostrum is its ability to increase efficiency of amino acids and carbohydrates absorbed from intestine. Muscle cell thus has more nutrients available.

**Bioactive colostrum** also supports immune system which is especially during shaping phase weakened and sensitive to various infections.

**Colostrum is fairly loaded with substances supporting power training:**

- supports muscle mass growth
- stimulates growth hormone activity (STH)
- supports post-workout recovery
- increases amino acids and carbohydrates absorbency from intestine
- supports organism immunity

WPI belongs to top protein sources with especially high content (up to quarter) of branched-chain amino acids (BCAA). BCAA have a dominant role among other essential amino acids because about 33 % of muscle protein is made by them. BCAA take part in energy metabolism during muscle work and if they are not supplied in sufficient amount, the worst can happen to an intensively working sportsmen - insufficient muscle mass renewal or even muscle mass catabolism. Complete opposite to what sportsmen want to achieve by power training.

Whey protein in our "shaping and losing fat" protein belongs to so called "**fast**" proteins which means that the protein is with no troubles absorbed by organism and then gets quickly into blood flow. Speed of this process prevents post-training catabolism and starts positive nitric balance.

Whey protein consumption just after your training (together with glucose) and also during the following two-hours period (time which is called anabolic window) is the most important time during which you have to supply the body with necessary substances to provide your body with quality recovery and support muscle mass creation.

**WPI in COMPRESS COLOSTRUM** is manufactured by special non-chemical production technology CFM (cross flow microfiltration) which allows maintaining high biological value of whey protein. Due to quality manufacturing process the final product contains only minimum amount of milk fat and lactose (milk sugar).

Training (and mainly your shaping and fat losing phase) and any other physical performance means stress for your organism which can literally be a "killer" of your muscle mass and power. Stress hormones which are produced during performance functions catabolically and moreover, they also weakens immunity. In the fight against catabolic processes and weakened immunity **COMPRESS COLOSTRUM** has two strong fractions - WPI and colostrum which has been unjustly omitted by sports nutrition consumers by now.

We recommend consuming **COMPRESS COLOSTRUM** optimally 2x - 3x a week in combination with COMPRESS WHEY AMINO 10 000 and COMPRESS N.T.

# COMPRESS D.T.

## DAY TIME PROTEIN

**LACTOWISE™** - - probiotics *Bacillus coagulans*,  
prebiotics Galactomannan

**DIGEZYME®** - digestive enzymes

**NITROPEPTIDE PROTEIN BLEND**  
ARABIC DI AND TRIPEPTIDE FRACTIONS

chocolate

strawberry

vanilla

Intended for special nutrition

## COMPRESS D. T.

**Top 75% protein supplement** with addition of special enzymes (DigeZyme®) which make protein, carbohydrates and fats digestion much easier. Enriched with probiotics and prebiotics (LactoWise™) which positively function on digestive tract, strengthens intestinal microflora and significantly support immune system resistance. Due to this complex and unique ingredients you can use **COMPRESS D. T.** several times a day and you can be sure that your organism will not only continuously be in an anabolic (muscle building) drive but your digestive tract will not be burdened and your body will utilize much more from the supplied amino acids.

**COMPRESS D. T.** is intended for all sportsmen who want to intake very high amount of protein every day and want to achieve really massive muscle growth.

**COMPRESS D. T.** is based on special mixture **NitroPeptide Protein Blend** (NPPB) which was created on the basis of researches made by NUTREND company. It contains optimal ratio and combination of top protein fractions that are manufactured by the top quality technologies (e.g. CFM method). NPPB provides maximum and long-lasting amino acids supply into muscles. The blend is made to provide gradual and continuous release and usage of separate items in digestive tract and blood flow.

**NitroPeptide Protein Blend** is multisynergic combination of three components that are just in right ratios for your body:

- **PeptoPro®** component – top di- and tripeptide hydrolysed fractions of casein that without any trouble and very fast enter through digestive tract into blood flow. Due to this amino acids level in blood is maintained on the required amount. Anabolic phase – muscle mass building process – starts in your muscles.
- **Whey protein (WPI and WPC)** which is absorbed in digestive tract more slowly. It gets into blood flow little bit later but just right in the time when PeptoPro® is used by muscle cells. Due to gradual utility of single components of NPPB, long-lasting and continuous muscle supply with maximum amount of necessary amino acid is provided.
- **Whey protein isolate (WPI)** is manufactured with revolution technology (cross flow microfiltration) which prevents protein denaturation.

When high amount of low quality protein is used, digestive tract can be burdened a lot and that is why we enriched **COMPRESS D. T.** with top digestive enzymes blend DigeZyme®. We also added special prebiotics and probiotics LactoWise™ blend.

**DigeZyme®** is multi-enzymatic complex of digestive enzymes that are based on:

- protease (enzyme digesting proteins),
- amylase (enzyme digesting carbohydrates) and
- lipase (enzyme digesting fats).

**Enzymes that we used are completely natural** which means that they are easily acceptable by organism. Your body can with no problems and more effectively utilize much higher protein amount. So finally you can supply your body with a required protein amount during a day.

Researches proved positive influence on human organism if digestive enzymes are combined with protein complexes. NUTREND company takes this a bit further and adds top blend LactoWise™ into **COMPRESS D. T.** which is a mixture of probiotics and prebiotics.

Probiotics (bacillus coagulans) and prebiotics (galactomannans) LactoWise™ positively influence digestive tract, strengthen intestinal microflora and stimulate motility of digestive tract and support thus immune system resistance.

Organism is during hardcore strength training inclinable to infection. To eliminate immune system weakening, we recommend regular consuming of **COMPRESS D. T.**

For optimum functioning and positive anabolic tune of organism during a day, we recommend combining **COMPRESS D. T.** together with **COMPRESS WHEY AMINO 10 000.**

# COMPRESS D.T.

## NITROPEPTIDE PROTEIN BLEND ABSORPTION CHART

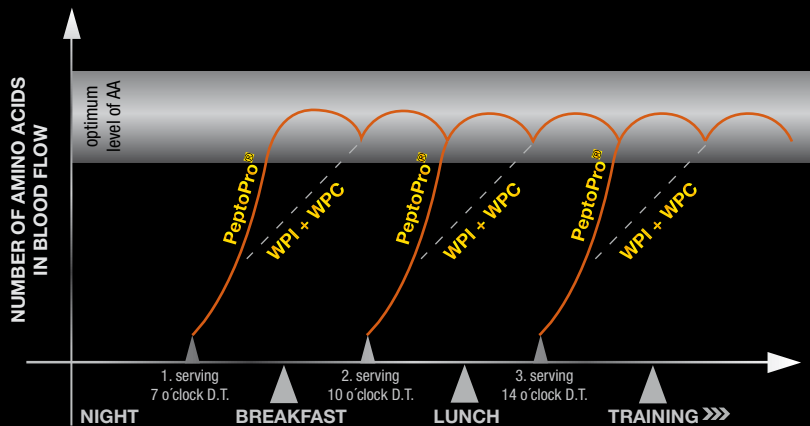

Due to special tri-synergic combination of single functional substances and more frequent usage during a day you are able to maintain optimal amino acids (AA) level in blood flow during the whole day.

PeptoPro® is a substance partially splitted into small, easily absorbable di- and tri-peptide fractions which is quickly utilized into blood flow without useless loss.

WPI and WPC (whey protein isolate and whey protein concentrate) digestion and absorbency is slower because digestive enzymes has to split these ingredients into peptides which can be then absorbed through the

digestive tract wall into blood.

We recommend consuming COMPRESS D. T. more often (up to 4 dosages during a day). To prevent excessive digestive tract burden or ineffective protein digestion and absorbency caused by high and huge proteins dosages, we added into the product special digestive enzymes DigeZyme® and prebiotic and probiotic mixture LactoWise™ which prevents this from happening.

# COMPRESS N.T.

## NIGHT TIME PROTEIN

**92% MICELLAR CASEIN IN MPI**  
**LACTOWISE™** - probiotics Bacillus coagulans,  
prebiotics Galactomannan

**HIGH CONTENT OF NATURAL CALCIUM**

chocolate

strawberry

vanilla

Intended for special nutrition

## **COMPRESS N. T.**

Unique protein that will supply your organism with quality amino acids.

Milk protein isolate with high content of micellar casein - 92% - is the base of protein supplement **COMPRESS N. T.** which is due to gradual long-lasting protein release suitable for night usage because it eliminates catabolic (muscle destroying) processes which naturally appears during a night. Unique addition of probiotics and prebiotics strengthen intestinal microflora and significantly support immune system resistance. **COMPRESS N. T.** protein is intended for all sportsmen who want to achieve maximum fast recovery after hard, demanding and rigorous trainings followed by noticeable muscle mass and performance growth.

**During night hours** massive recovery processes in the body take part during which empty stores (e. g. muscle glycogen) are renewed. Natural tuning of organism at night is catabolic. To prevent these processes (or to eliminate them to minimum) you must provide the body with different food than during a day. **COMPRESS N. T.** produces quality organism recovery from „external sources“.

**COMPRESS N. T.** is a unique product which is from 92% based on micellar casein which is completed with necessary dosage of whey protein fraction. Minimum presence of this fraction provides quick start of recovery processes immediately after consummation and these recovery processes are maintained during a night by gradual micellar casein release.

**Micellar casein absorbency** takes part in gastrointestinal tract slower but much longer. That is why there is no lack of protein during night so no catabolic processes in muscles appear and this is valid also for late night hours.

**COMPRESS N. T.** protein is enriched with probiotics and prebiotics blend LactoWise™.

Probiotics (Bacillus coagulans) and prebiotics (Galactomannans) LactoWise™ positively influence digestive tract:

- strengthen intestinal microflora,
- stimulate digestive tract motility and support resistance of immune system.

Due to high quality of LactoWise™ blend, digestion during night is trouble-free and effective and also immune system which is during a day burdened and weakened (by external factors: stress, exercise, meal, environment etc.) is supported.

MPI (milk protein isolate) contains a lot of chelate bonds of some mineral substances, mainly calcium. **COMPRESS N. T.** contains high amount of calcium and due to chelate bonds it is easily and effectively absorbable for the organism. Calcium has also another important role, due to its synergic effect on micellar casein it made absorbency into organism much effective.

**COMPRESS N. T.** is an unbeatable night time-released protein. Do not choose cheap fakes but rely on quality protein sources and afford them in maximum legally allowed amount.

To get the maximum effect we recommend consuming just before going to bed in combination with other products from COMPRESS EXPAND line depending on phase and intensity of your training.

# COMPRESS B.I.G.

**6.000 MG** BCAA

**3.000 MG** L-Glutamine

Gradual carbohydrates release

Contains ZMA, colostrums, Palatinose™

**NITROPEPTIDE PROTEIN BLEND**  
ANABOLIC DI AND TRIPEPTIDE FRACTIONS

## BODYBUILDING INSTANT GAINER

Intended for special nutrition

## COMPRESS B.I.G.

**COMPRESS BODYBUILDING INSTANT GAINER** (be B.I.G.) is a volume supplement of new generation with unique and highly efficient ingredients. The base of carbohydrates component in **COMPRESS B.I.G.** is a special mixture - NitroPeptide

Protein Blend and carbohydrate isomaltulose (Palatinose™) which has the same energetic value as glucose (which means that it supplies the body with necessary carbohydrates for maximum energy renewal) but it does not cause unrequired glycaemia increase (so called hyperglycemia). Due to extreme amount of BCAA - 6000 mg and L-Glutamine - 3000 mg which you get in each dosage of **COMPRESS B.I.G.** you will dig up really the strong pre-training drink allowing you to reach higher performance without negative protein balance. Usage of **COMPRESS B.I.G.** after your workout will guarantee you fast start of recovery processes necessary for distinct muscle growth. **COMPRESS B.I.G.** is intended for all sportsmen that strive for muscle mass and power growth and especially if common supplements does not work and help anymore.

The base of the product is a special mixture **NitroPeptide Protein Blend** (NPPB) which was created on the basis of research made by NUTREND company. This blend contains optimal ratio and combination of top protein fractions manufactured by top quality technologies (e.g. CFM method). NPPB provides maximum and long-lasting amino acids supply into muscles (muscle mass and power growth). The blend is made to provide gradual and continuous release and utility of each item of the blend in digestive tract and then also in blood flow.

**NPPB is a multisynergic combination of three components that are just in right ratios for your body:**

- **PeptoPro®** component – top di- and tripeptide hydrolysed fractions of casein that without any trouble and very fast enter through digestive tract into blood flow. Due to this amino acids level in blood is maintained on the required amount. Anabolic phase – muscle mass building process – starts in your muscles.
- **Whey protein (WPI and WPC)** which is absorbed in digestive tract more slowly. It gets into blood flow little bit later but just right in the time when PeptoPro® is used by muscle cells. Due to gradual utility of single components of NPPB, long-lasting and continuous muscle supply with maximum amount of necessary amino acid is provided.
- **Whey protein isolate (WPI)** is manufactured with revolution technology (cross flow microfiltration) which prevents protein denaturation.

Protein profile is complemented by **colostrum** (first milk of mammals) which contains growth factors which stimulate anabolic processes in organism.

Carbohydrates component **COMPRESS B.I.G.** is presented by a carbohydrate of new generation, isomaltulose (**Palatinose™**). Due to trademark which is proved by several researches we offer you the best you can get on the market.

Palatinose™ is a unique low glycemic carbohydrate with prolonged energyzation in the form of glucose.

**Palatinose™ is a revolution carbohydrate with:**

- high energy potential,
- low glycemic index

Due to mega dosage of BCAA (6000 mg) and L-Glutamine (3000 mg) **COMPRESS**

B.I.G. has a specific and slightly bitter taste which corresponds to maximum legally allowed amount of all effective substances.

**Usage of COMPRESS B.I.G. pre-workout**

To obtain maximum effect we recommend consuming 1 serving (70 g) about 60 - 90 minutes before your training depending on your daily nutrients intake. If you had rich lunch, you should use **COMPRESS B.I.G.** about 90 minutes pre-workout.

Research showed that consummation of right dosage of protein-carbohydrates complex before your exercise will provide the body with required nutrients level (including amino acids) which is in contrary to pure carbohydrates complexes products. **It results in better performance which is not followed by negative protein balance.**

**Usage of COMPRESS B.I.G. post your workout**

The fact that **COMPRESS B.I.G.** can be consumed during stretching phase of your training (in the so called carbohydrates deficit phase) provides you optimum energy recharge and start of muscle recovery without depositing into fatty stores.

Carbohydrates component post your exercise activates digestive tract immediately and post-workout hypoglycemia is balanced (low carbohydrates level in blood). Muscle cells are after intensive strength training depleted and start of catabolic (muscles destroying) processes of your own muscle mass threaten. That is why your body needs to intake "quality carbohydrates" immediately after the end of your training to be able to start quality recovery and prevent possible catabolism. Without carbohydrates, recovery starts too late, it is of poor quality and takes much longer. Balanced presents of single and compound carbohydrates provides optimum level of glycaemia – optimal level of insulin (stimulation anabolic and proteosynthetic processes).

To get the maximum effect we recommend combining **COMPRESS B.I.G.** with **COMPRESS WHEY AMINO 10 000**.

# COMPRESS B.I.G.

## CHART SHOWING COMPRESS B.I.G. EFFECT ON MUSCLE MASS RECOVERY

**COMPRESS B.I.G.** is more than a common gainer. Due to high protein content (25 %), unique mixture NitroPeptide Protein Blend, low glycemic carbohydrate isomaltulose (Palatinose™) and high BCAA (6000 mg) and L-Glutamine (3000 mg) content, you will get the best for quality recovery after your hardcore training.

**COMPRESS B.I.G.** is the only protein-carbohydrates drink which you can start consuming during stretching phase of your training.

### Common protein drink

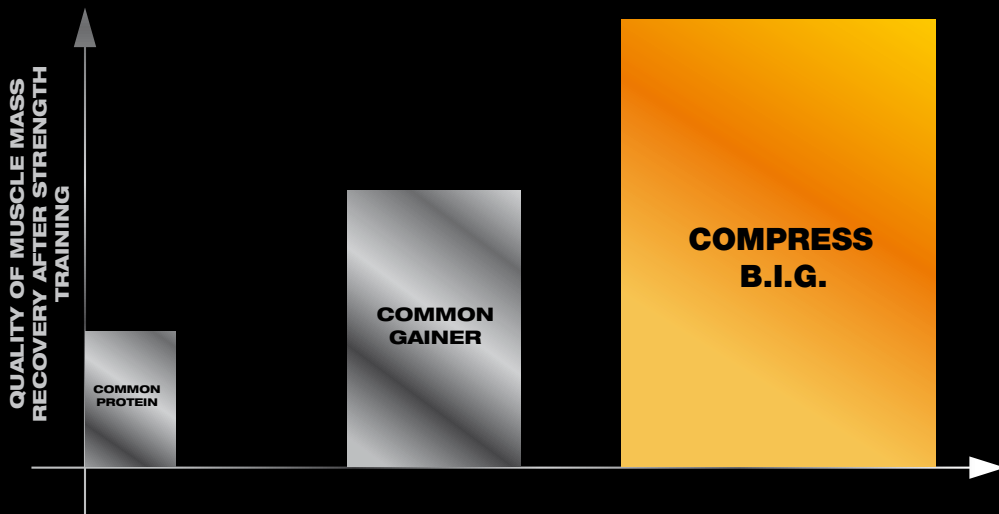

If you choose common protein drink right after your training, you will slow down start of muscle recovery (you will slow down muscle glycogen, ATP and CP renewal) to minimum.

### Common gainer

If you supply energy with common gainer, you will start muscle mass recovery but what really matters is the ingredients and functional substances – and the speed by which your organism utilizes all ingredients.

### COMPRESS B.I.G.

Our protein-carbohydrates drink offers you all you need in one. Quality functional substances in required amount, fast recovery start and muscle glycogen renewal support.

**COMPRESS**

# **WHEY AMINO 10 000**

## **100% WHEY HYDROLYSATE**

**2500 MG OF AMINO ACIDS IN ONE  
TABLET**

Anabolic and anti-catabolic effect  
High coefficient of PNB (positive nitric  
balance)

Intended for special nutrition

## COMPRESS WHEY AMINO 10000

The base of **COMPRESS WHEY AMINO 10 000** is a **pure whey protein hydrolysate** with high level of enzymatic hydrolysis. Due to this production procedure **COMPRESS WHEY AMINO 10 000** contains the highest possible amount of free peptides which provide the fastest possible absorbency of amino acids from the digestive tract and transfer into blood flow and then to muscle cells. Each tablet of **COMPRESS WHEY AMINO 10 000** contains 2500 mg of hydrolysate.

**COMPRESS WHEY AMINO 10 000** is intended for all sportsmen who want to prevent catabolic (muscles destroying) processes in their bodies and want to achieve only anabolic (muscles building) drive.

If you follow the recommended daily dosage – 3times a day 4 tablets – you will supply the body with 30 000 mg of the highest quality hydrolyzed amino acids!

**COMPRESS WHEY AMINO 10 000** offers unique combination of amino acids in the purest possible form.

By **hydrolyzation of whey protein**, small and pure peptide fractions are created which do not have to be digested by proteases (enzymes in digestive tract that take part in protein splitting) which takes more time and is more complicated. Raw protein can be digested for several hours (3 - 8 hours) but if you use **COMPRESS WHEY AMINO 10 000**, digestion of protein will not take so long. Pure whey hydrolysate penetrates through

the wall of gastrointestinal tract quickly and it almost immediately and with minimum loss gets into blood.

Level of amino acids (AA) in blood flow during a day varies depending on your daily routine (working rate, training unit, meal, stress etc.). If your body has shortage of amino acids, the threat of catabolic processes in muscles will appear. To prevent this unrequired effect, we recommend consuming **COMPRESS WHEY AMINO 10 000** regularly – 4 tablets 3times a day. One serving provides you with maximum intake of necessary and effectively utilized AA (10 000 mg).

Organism of intensively training sportsmen requires high dosage of protein. However, gastrointestinal tract is not able to accept such a big amount of protein in raw form. **COMPRESS WHEY AMINO 10 000** offers you solution – very simple and effective form, tablets, which do not burden digestive tract, are absorbed quickly and get right to places where your body needs them.

**For ideal nutrition of your muscles during a day** combine **COMPRESS WHEY AMINO 10 000** with **COMPRESS D. T.** You will achieve effective supply of necessary nutrients into muscles, maintain permanent and optimal amino acids level in blood flow which results in extreme muscle mass growth.

**COMPRESS**

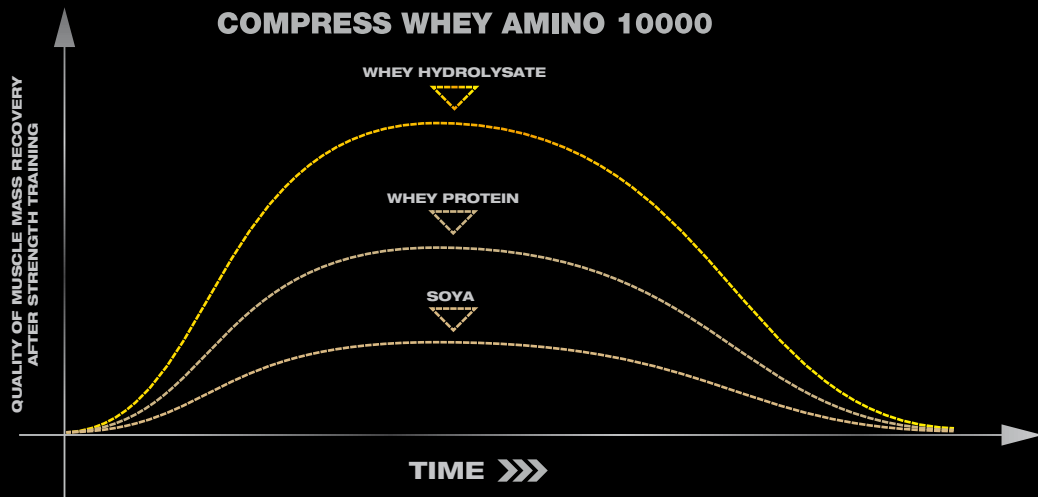

# WHEY AMINO 10 000

## WHEY HYDROLYSATE UTILITY CHART

**COMPRESS WHEY AMINO 10 000** is a 100 % pure whey protein which is the best absorbable form of necessary amino acids important for your organism.

When compared with other possibilities, e.g. whey protein or soya protein hydrolysate, it is unbeatable.

Hydrolyzed amino acids are utilized and got into blood quickly and in maximum possible amount.

*Compress*

# COMPRESS FEVER

## GARCITRIN™ WITH L-CARNITINE

- fat management

## GUGULIPID®

- metabolism acceleration

## BIOPERINE®

- improved thermogenesis  
& substances absorption

## HARDCORE FAT BURNER

Dietary supplement

## COMPRESS FEVER

What are the most efficient fat burners that you know? Synephrine and caffeine are guaranteed combinations, guggulsterones belong to the top ingredient and hydroxycitric acid (HCA) with L-Carnitine cannot be omitted in any reduction diet, too. Imagine that all the above mentioned effective substances are incorporated in one and the only supplement. And not only this, they are in addition to that in such strong concentrations that are just at the highest level to be allowed and legally sell in the Czech Republic. This is **COMPRESS FEVER**. Fat burner with absolutely maximum stimulation and thermogenesis-acceleration effect which can be obtained when all the legally approved substances are used! And that is not all. **COMPRESS FEVER** contains also Bioperine® (black pepper) which increases utility of mentioned effective substances by 30 %! Compare ingredients and composition of **COMPRESS FEVER** with any other fat burner which can be bought on the Czech market. You will not find any better! And results that you achieve with **COMPRESS FEVER** will confirm you what we have just said!

**COMPRESS FEVER** is a fat burner for sportsmen who prefer hard and intensive training. Maximum allowed dosage of efficient substances will fill your whole body and you will be able to feel energy explosion in your trained muscles. With **COMPRESS FEVER** you will beat your limits.

Due to carefully chosen ingredients **COMPRESS FEVER** ideally fits to **COMPRESS EXPAND** line of product as it uses top quality ingredients which effects are proven by various researches. Chosen effective substances are on natural base which means that they are easily absorbed and utilized by body.

### What can you expect after **COMPRESS FEVER** consumption?

**Metabolism acceleration** - Gugulipid® is a registered trademark (Sabinsa Corporation company) as it contains highly efficient guggulsterones, standardized extract from commiphora mukul plant which is used in ayurveda medicine for obesity and hyperlipidemia (high level of fats in blood) solution and it also decreases LDL cholesterol level. Furthermore it influences thyroid gland functions improvement which results in overall metabolism increase.

**Organism stimulation** – high content of stimulation substances, caffeine and synephrine, (guarana extract, yerba mate extract, citrus aurantium extract, green tea extract) effectively stimulate organism and support massive muscles shaping. Strong diuretic effect of caffeine and synephrine starts just when you need it.

Increase of internal thermogenesis. Bioperine® is a thermonutrient – standardized extract from piper nigrum fruit (black pepper). Bioperine® improves nutrients absorption by 30 %. Due to its presence in **COMPRESS FEVER** maximum possible absorption of other effective substances is ensured. Absorption is a key factor in body for nutrients that are supposed to be biologically effective. Due to their ability to improve nutrition absorbency, they are called as natural thermonutrients and biological boosters. As soon as thermogenesis starts, enquiry for nutrients for metabolic process maintenance appears and it accelerates metabolism.

**Efficient management with stored fat.** Due to researches proven combination of top substances Garcitrin® and L-Carnitine (Carnipure™ - brand-name product of Swiss company Lonza) effective subcutaneous fat management appears. Synergic coordination of those two substances increases their individual efficiency. Garcitrin® is an ideal combination of hydroxycitric acid (HCA) and garcinol developed by scientists which is effective for fatty acids, cholesterol and fats (lipids) synthesis repression. L-Carnitine is a substance necessary for effective fat burning. When you train more intensively, usage of L-Carnitine is increased and its shortage prevents fats usage.

We recommend the following consumption of **COMPRESS FEVER** – take 3 tablets twice a day in the morning and at noon. For fast absorbency of all contained substances into organism, we recommend swallowing the capsules on an empty stomach. Sensitive people should shorten the starving time after usage of **COMPRESS FEVER** to minimum. We do not recommend using the product in an evening and night hours due to maximum stimulation it provides.

# COMPRESS ACCESSORIES

## COMPRESS EXPAND SHAKER

New generation of shakers! Shaker with possibility to separate powder concentrate and liquids which you can have always with you. Due to new practical technology this shaker allows you to mix the powder with water conveniently and just before usage.

## COMPRESS EXPAND BODYBUILDING T-SHIRT

Black cotton bodybuilding t-shirt with special COMPRESS EXPAND print.  
Sizes: L, XL, XXL

## COMPRESS EXPAND BATH TOWEL

Black and white bath towel. Size: 75 x 140 cm

## COMPRESS EXPAND BODYBUILDING GLOVES

Gloves are made of the top quality leather used on palm side and also on the back of the hand.  
Sizes: S, M, L, XL, XXL

Unique low glycemic carbohydrate of new generation with prolonged energization in the form of glucose. It does not cause hyperglycemia after consumption.

Top di- and tripeptide hydrolyzed casein fractions that with no problem and quickly go through the digestive tract into blood flow. Due to unique way of manufacturing, PeptoPro® has a neutral taste. PeptoPro® accelerates post-training recovery, helps to increase overall organism resistance, delays the onset of fatigue during performance and increases overall physical performance.

Multienzymatic complex which is based on the blend of digestive enzymes: protease (enzyme digesting proteins), amylase (enzyme digesting starch), lipase (enzyme digesting fats). For more effective cellulose and lactose digesting Digezyme® additionally contains cellulose and lactose.

Top probiotics (e.g. bacillus coagulans) and prebiotics (e.g. galactomannans) blend that positively influences digestive tract, strengthens intestinal microflora, stimulates motility of digestive tract and supports resistance of immune system. LactoWise™ provides trouble-free and effective digestion.

Highly efficient guggulsterones, standardized extract from commiphora mukul plant. It causes metabolism acceleration, stimulates thyroid gland functioning and decreases LDL cholesterol level.

Natural thermotrient and biological enhancer. It improves absorbency of other substances that are supplied together with this substance by 30 %

Standardized extract from piper nigrum fruits. Maximum efficient combination of hydroxycitric acid (HCA) and garcinol. It suppresses synthesis of fatty acids, cholesterol and fats.

Carnipure™ offers purest L-Carnitine and is a trademark of Lonza Ltd, Switzerland.

Brand-name L-Carnitine – substance necessary for effective fat usage and burning. During intensive training need of L-Carnitine is increased and that is why it is important to supply it externally.
